

We claim:

1. An apparatus for use in RF shielding, comprising:

a member comprising RF shielding and configured for forming a substantially complete RF shield when the member is adjoined to the cavity of a magnet associated with magnet-RF-shielding.

2. The apparatus of claim 1, further comprising a patient support unit configured to support a patient inside the RF shield.
3. The apparatus of claim 1, wherein the member comprises a support for supporting the patient support unit.
4. The apparatus of claim 3, wherein the member is attachable to the magnet.
5. The apparatus of claim 2, wherein the member is attachable to the patient support unit.
6. The apparatus of claim 2, wherein the member comprises apertures.
